

BAC

(Blood Alcohol Concentration)

What does it mean ?

00%	0 drinks	Only safe level
.01-.02%	½ - 2 drinks	Impairment begins
.03-.07%	1-4 drinks	Reflexes, judgement, concentration and vision affected. Combined with fatigue, illness, stress, other drugs, or poor driving conditions increases the risk of having a crash!
.08-.11%	3-10 drinks	Illegal in Utah! Greater levels of impairment in all of the above! Average risk of crash is 10 times normal for an adult, 70-80 times normal for someone under 21!
.12-.15%	4-12 drinks	Motor skills, mental functions, and vision are severely impaired!
.16-.24%	6-14 drinks	Extreme health and crash risk!
.25-.34%	8-18 drinks	Unconsciousness!
.35-.45%	9-20 drinks	Death will occur!

Alcohol affects everyone differently. BAC may be affected by age, gender, physical condition, food consumed, medication, and other factors. Also, different mixed drinks contain different amounts of alcohol, so it's important to know how much alcohol has been consumed, not just how many drinks a person has had.

BAR

Typical Alcohol Prices

Tap Beer - \$3.25

Margarita - \$6.45

DUI - \$10,100

Here are some typical costs of DUI

Fine/Court Fees	\$ 1,200
